	Note	All parameters, unless otherwise specified, are measured values obtained under the conditions of 230VAC input voltage, rated load and 25°C. The ripple and noise voltages were measured at the end of a 12-inch twisted pair with 0.1μF and 47μF capacitors attached, using a 20 MHz bandwidth oscilloscope. At a 20 MHz bandwidth, Take measurements. 3. Accuracy: It includes setting error, linearity adjustment rate and load adjustment rate. 4. Linear regulation measurement method: Test from low voltage to high voltage under rated load. 5. Load regulation measurement method: from 0% to 100% of rated load The startup time is measured under cold start conditions. Frequent and rapid on/off cycles may increase the startup time. 7. When operating at an altitude above 2000 meters (6500 ft): The operating environment temperature needs to be reduced by 5°C for every 1000 meters increase in altitude.
